To delete Dashboard click here

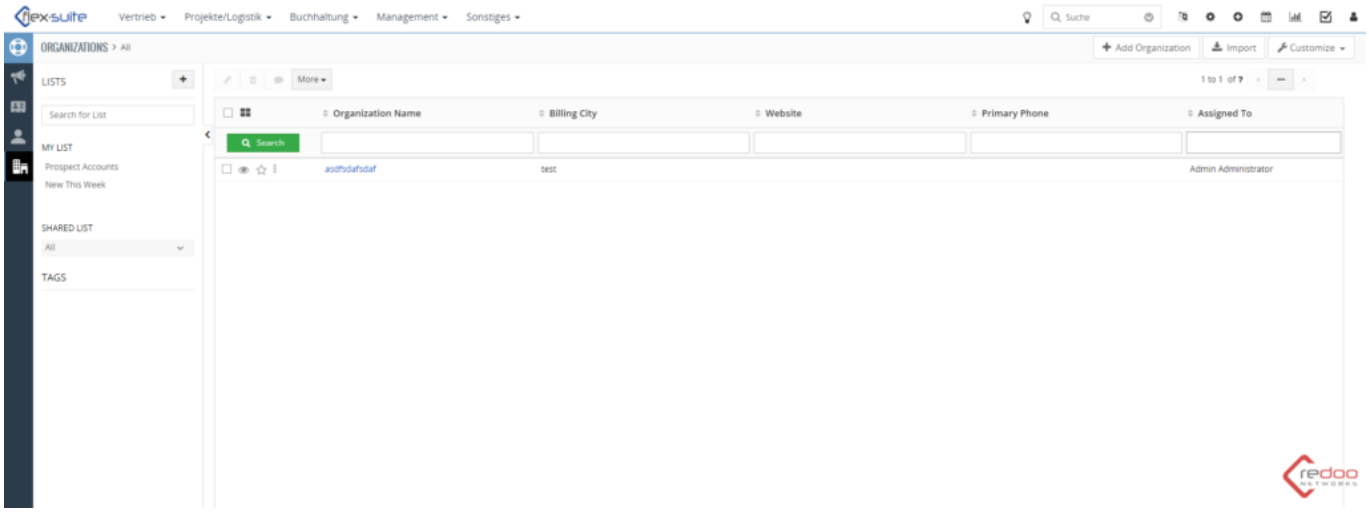

To save click here

 Copyright © 2026 Redoo Networks GmbH

Here in the left top corner you can see the list

Lets move to the Organization page and see how records of the CRM are listed

Main part of the page is a place where all records are listed

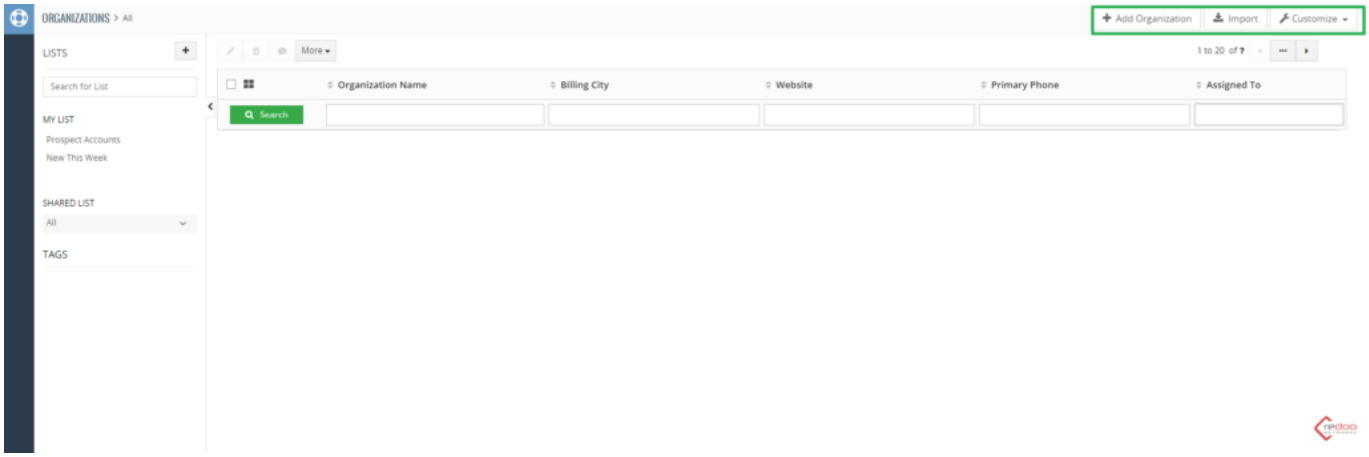

Here you can see recors's basic information, in this case: Organization Name, Billing City, Website and Primary Phone

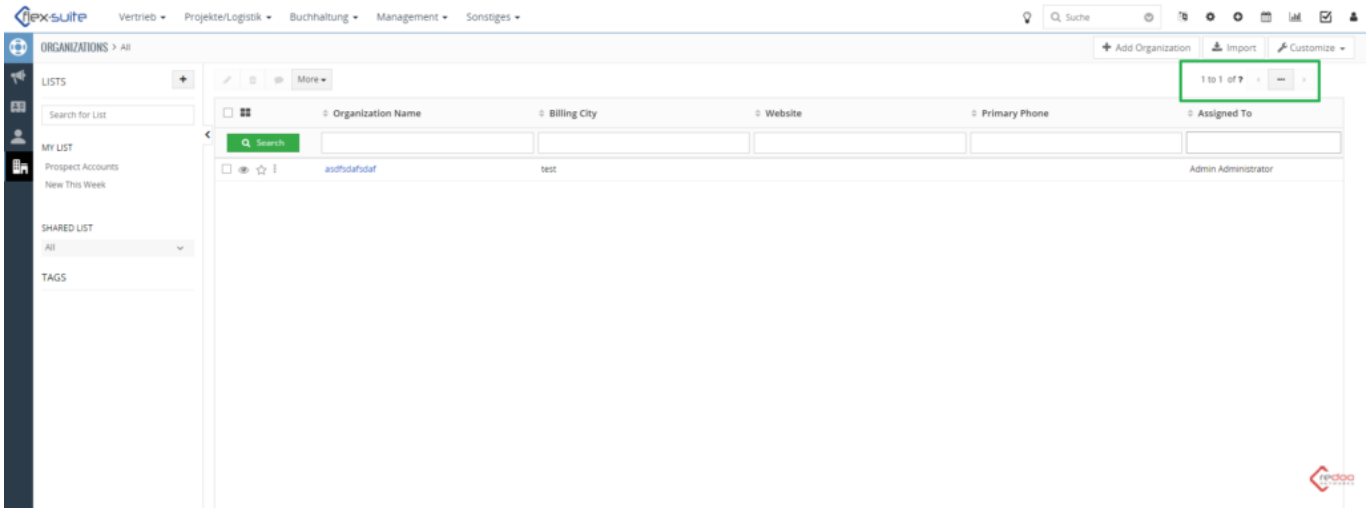

There is also a column where a person assigned to that particular record can be seen

Copyright © 2026 Redoo Networks GmbH

The right upper section responds for adding, importing and customizing records

Below there is a page counter and buttons to operate the navigation between them

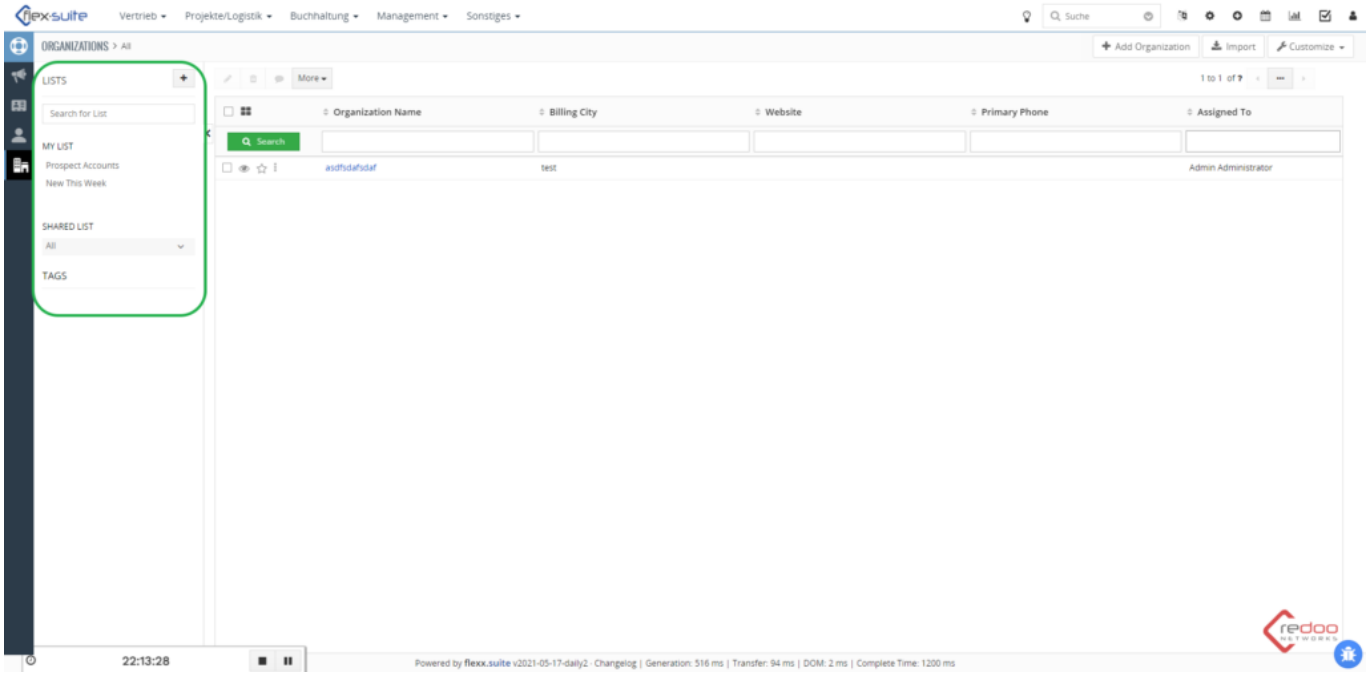

In the left corner you can view the list menu where you are able to configure a list view of the page

You have the option of defining lists in the area marked green. These can help you with the clarity of your orders.

You can define your lists according to various attributes, for example, the current status, the customer and many more.

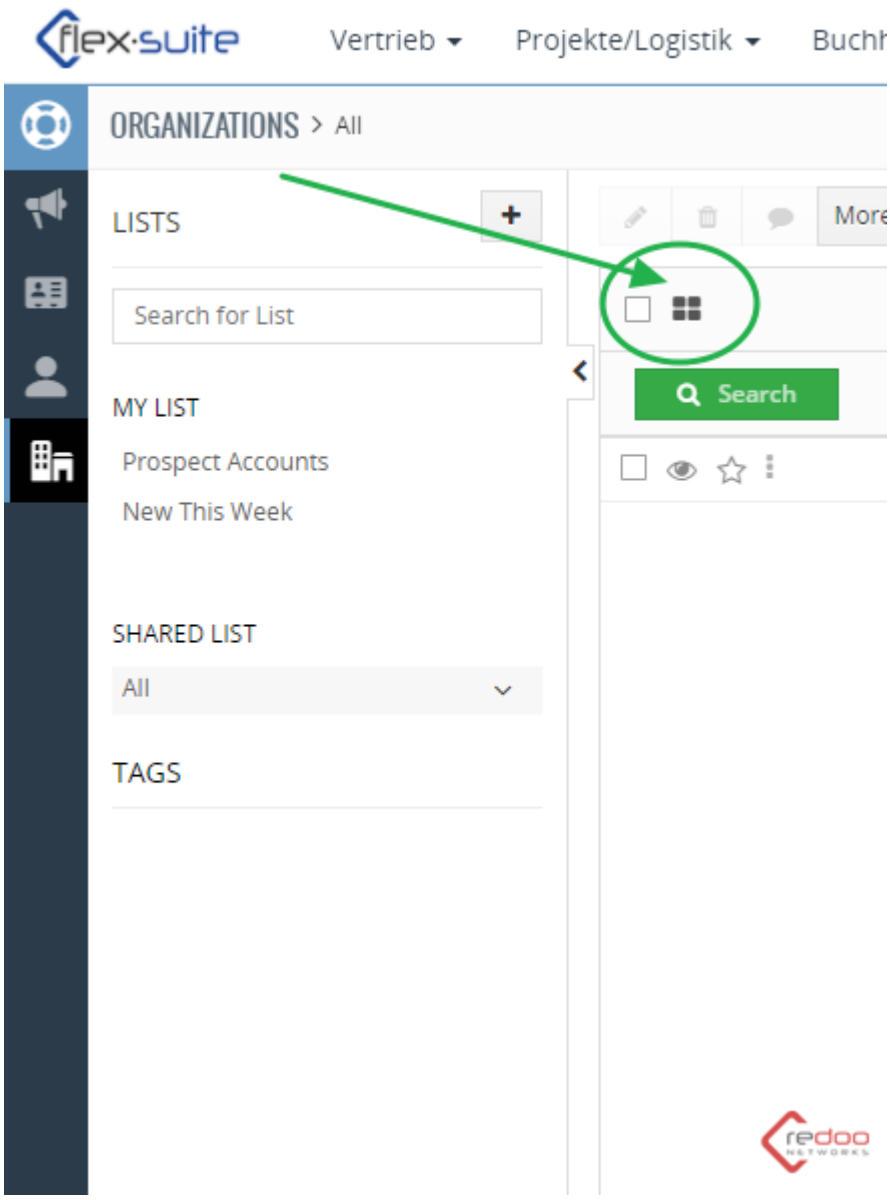

Copyright © 2026 Redoo Networks GmbH

To do this, click on the “+” sign in the highlighted area and create your own lists

In the green marked area you can now define your central list view.

 Copyright © 2026 Redoo Networks GmbH

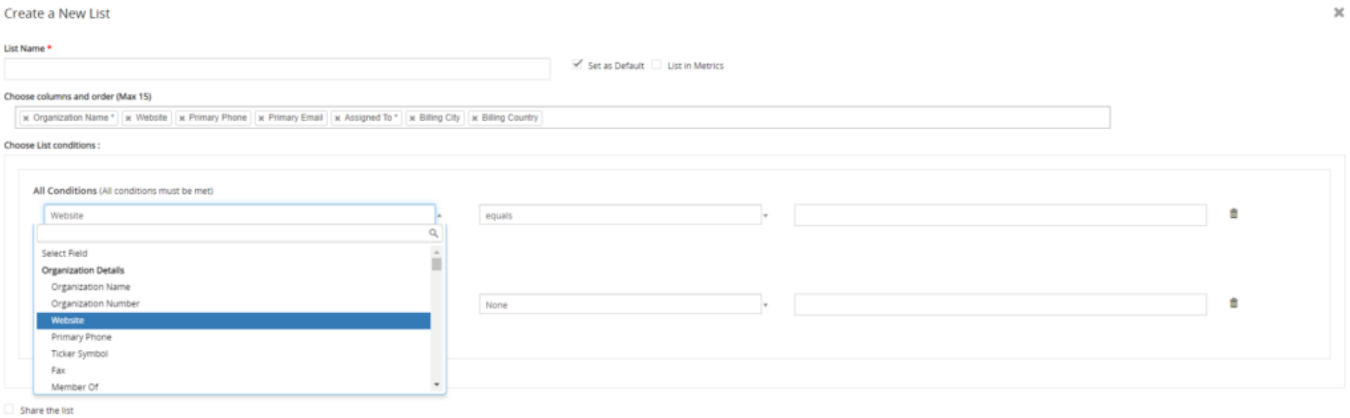

Define your list view in the window that now opens.

You can fill in the Listname, choose the columns with suitable for you information

 Copyright © 2026 Redoo Networks GmbH

You can also add your custom conditions by pressing “Add Condition” button

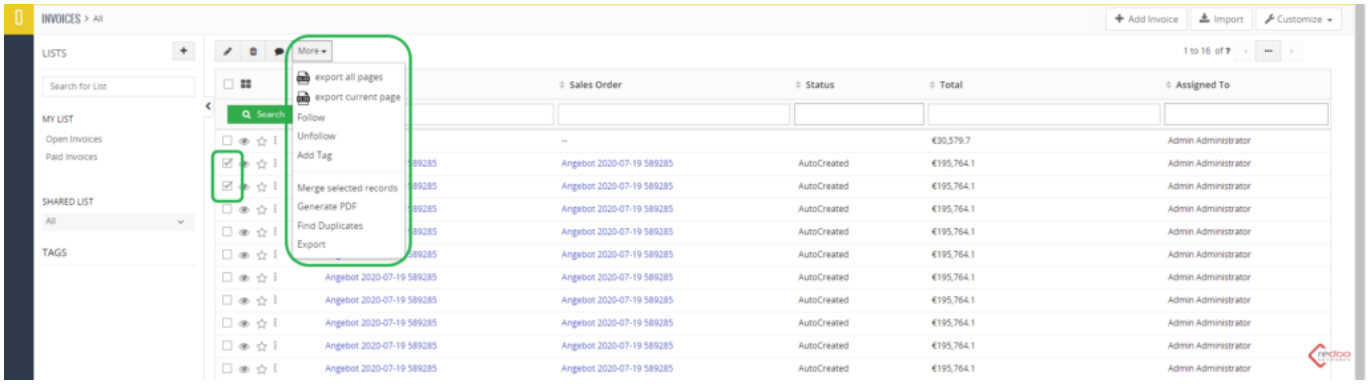

You can select a record via check mark and by pressing “More” button on the top you will see a pop up window were you can select a various available actions that you can apply to the checked records

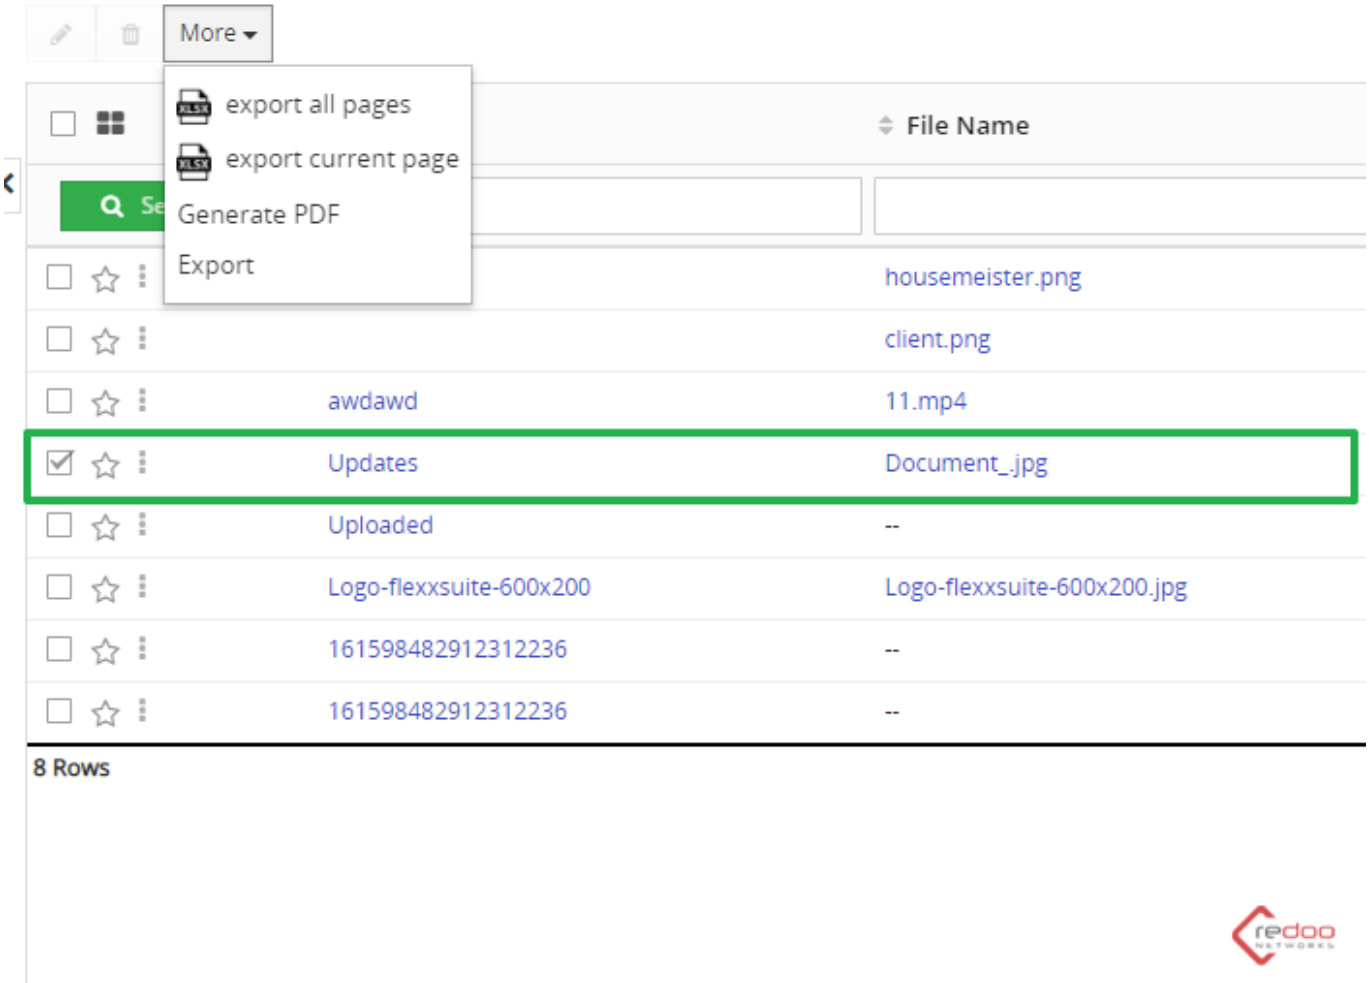

From top to bottom:

- Export all pages
- Export current pages
- Follow – allows you to track changes in a specific record
- Unfollow
- Add Tag
- Merge selected records
- Generate PDF
- Find duplicate
- Export

 Copyright © 2026 Redoo Networks GmbH

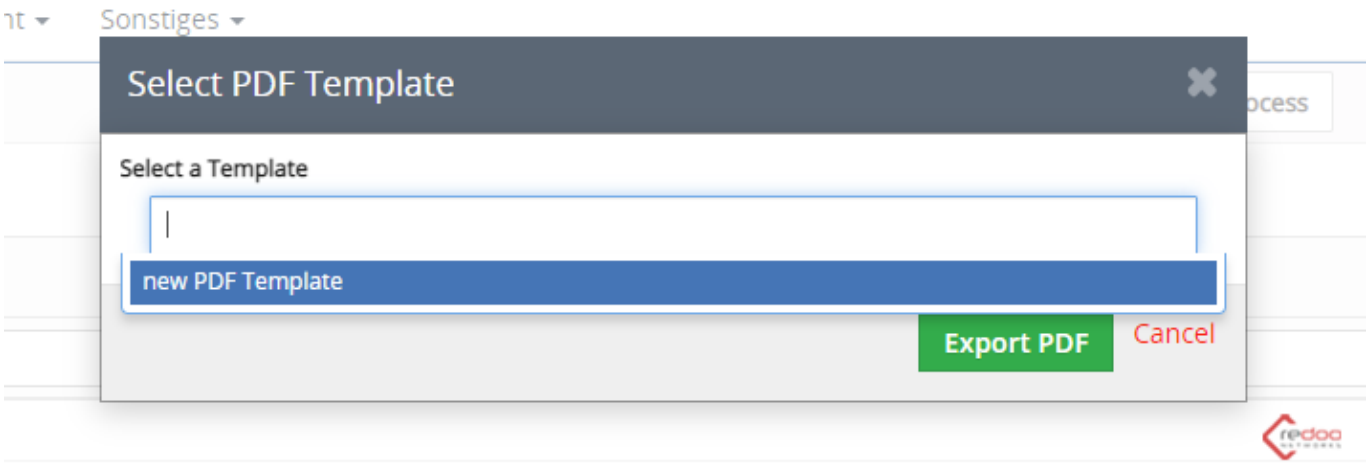

For example lets select a Generate PDF option for the Updates record in Documents module

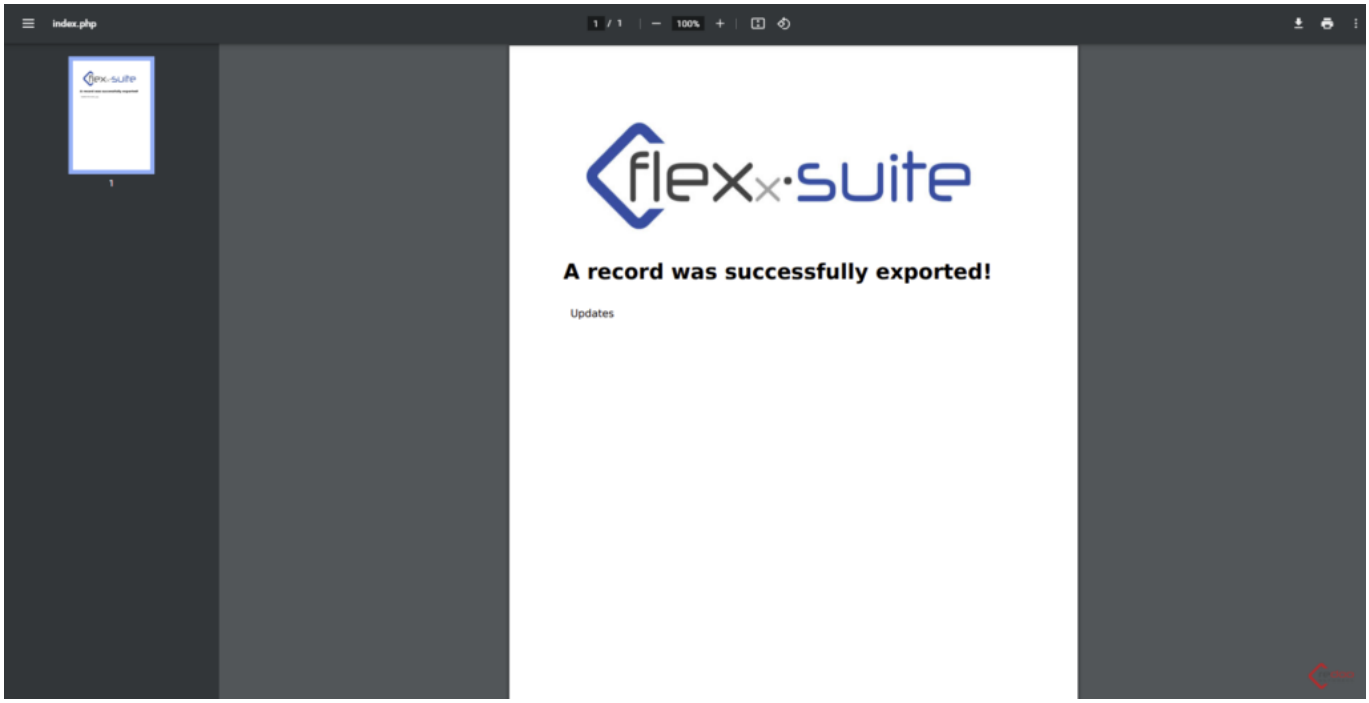

The “Select PDF Template” window will open and here you are able to select a PDF template

 Copyright © 2026 Redoo Networks GmbH

As you have selected a template press the button “Export PDF” to export

Then a PDF will be created and you can download it on your device

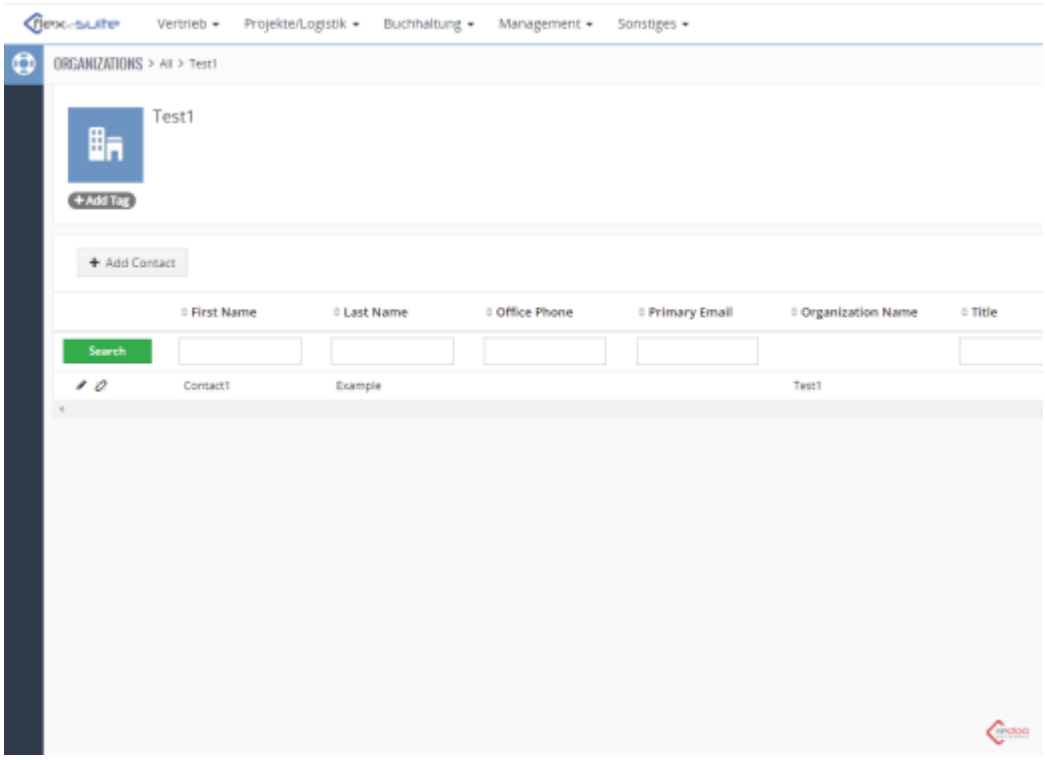

Merging Records

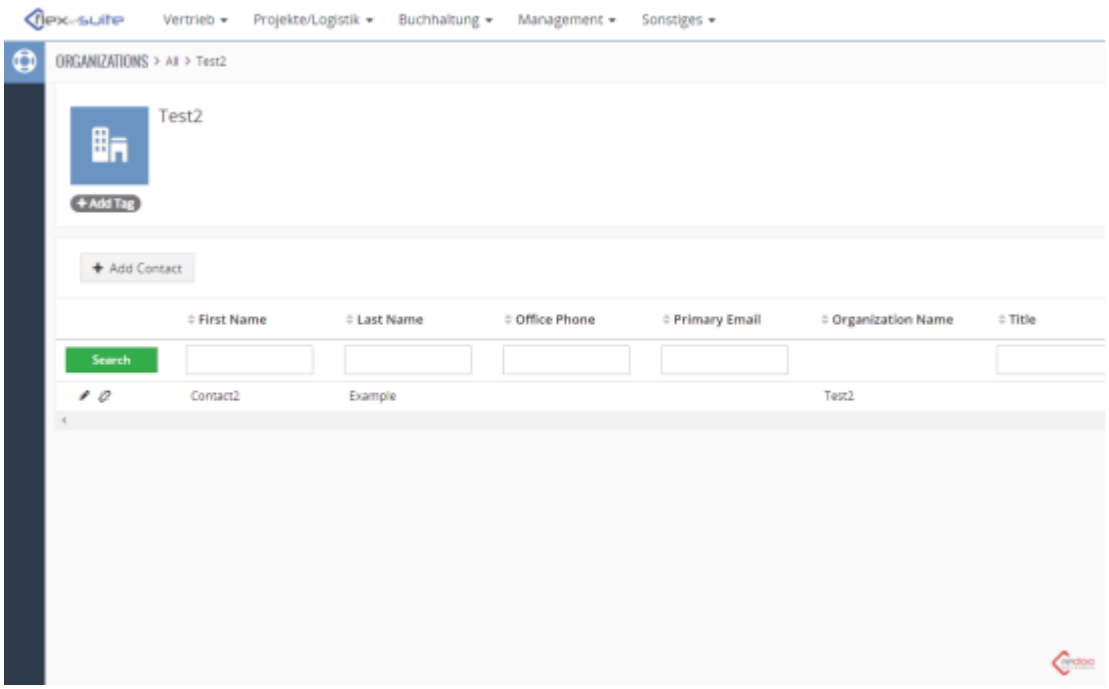

When you select two records a special feature opens and you can merge these records

 Copyright © 2026 Redoo Networks GmbH

In this case we will merge records Test1 and Test2

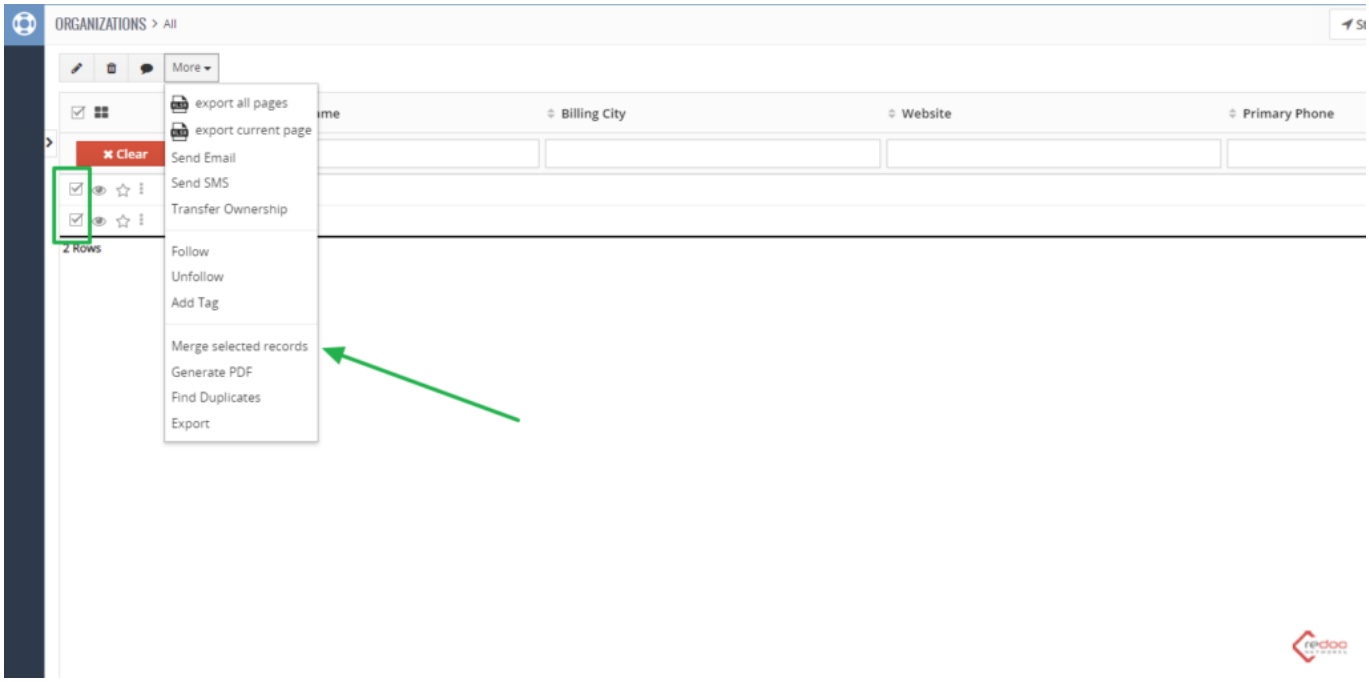

The Test1 record has one Contact named Contact1, when the Test2 has a Contact2

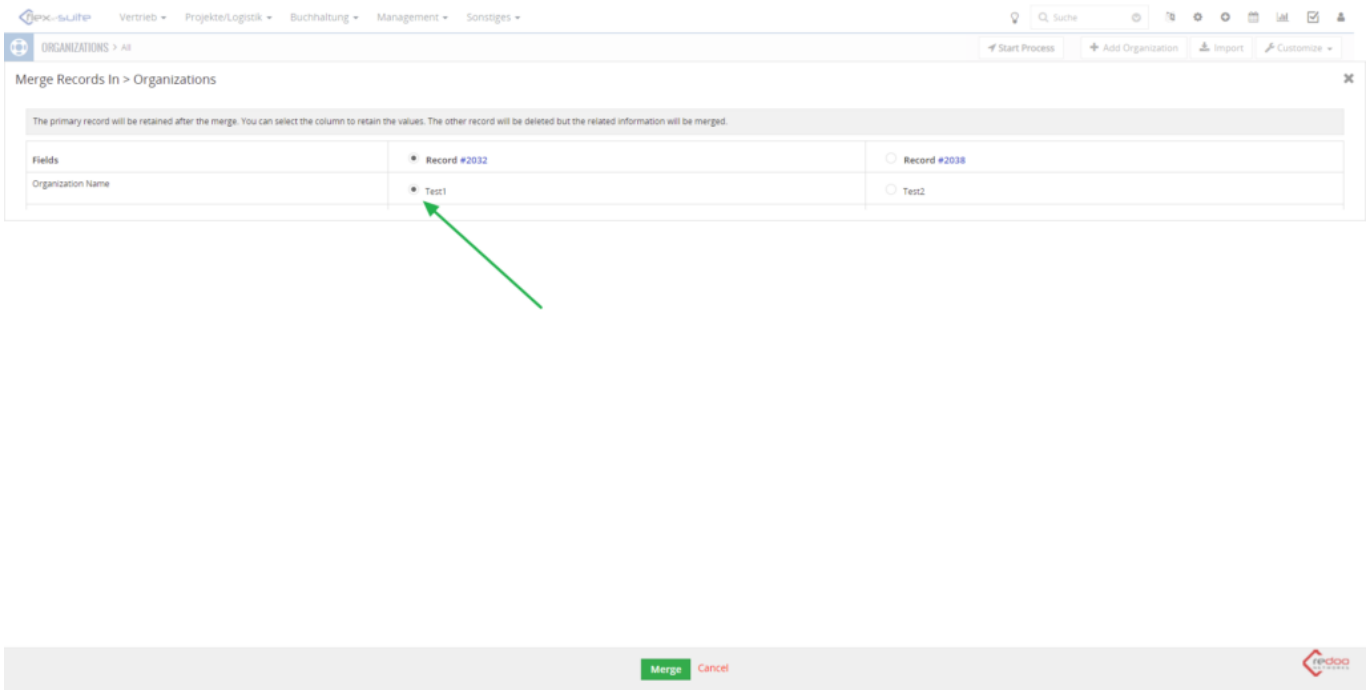

After the merge both of these contacts should belong to one record

Copyright © 2026 Redoo Networks GmbH

After you select **Merge selected records** a window opens where you select the primary record that will be retained after the merge. You can select the column to retain the values. The other record will be deleted but the related information will be merged.

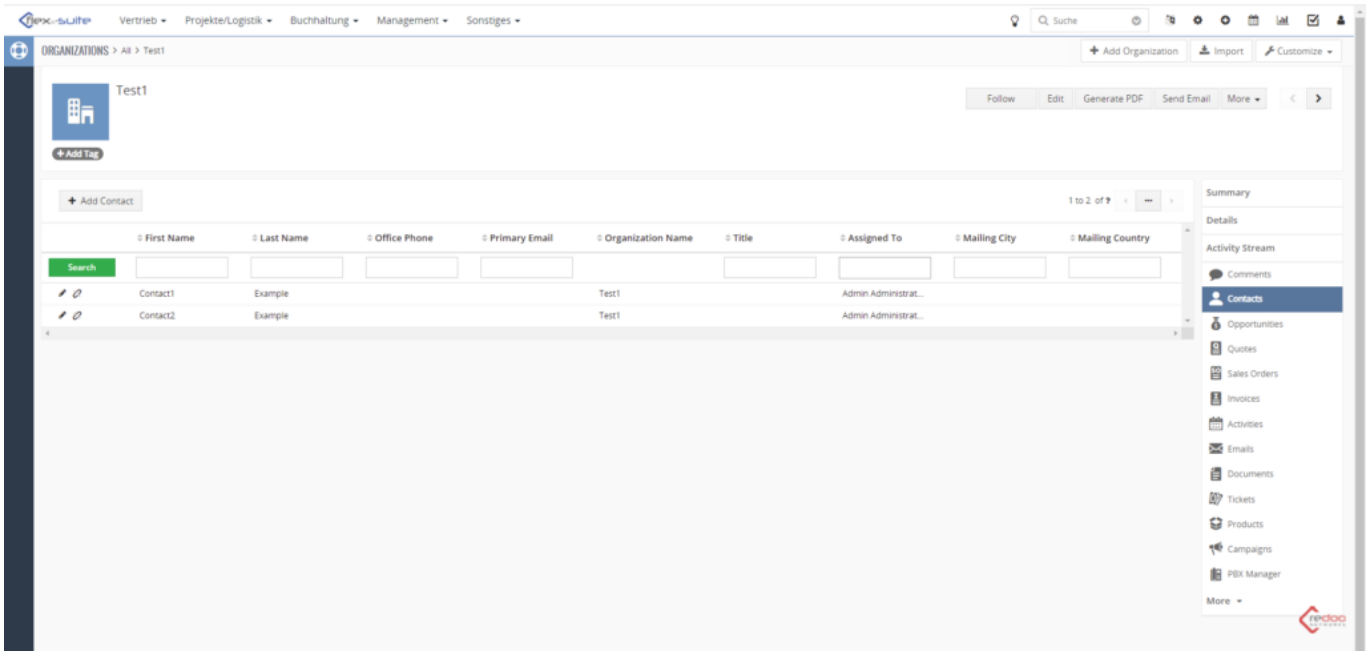

In this case I select the Test1 record which will inherit contacts from the Test2 record

 Copyright © 2026 Redoo Networks GmbH

After that press the green **Merge** button below

Now we can see that both contacts belong to the Test1 record while the Test2 record is deleted, but its contact is inherited by another record

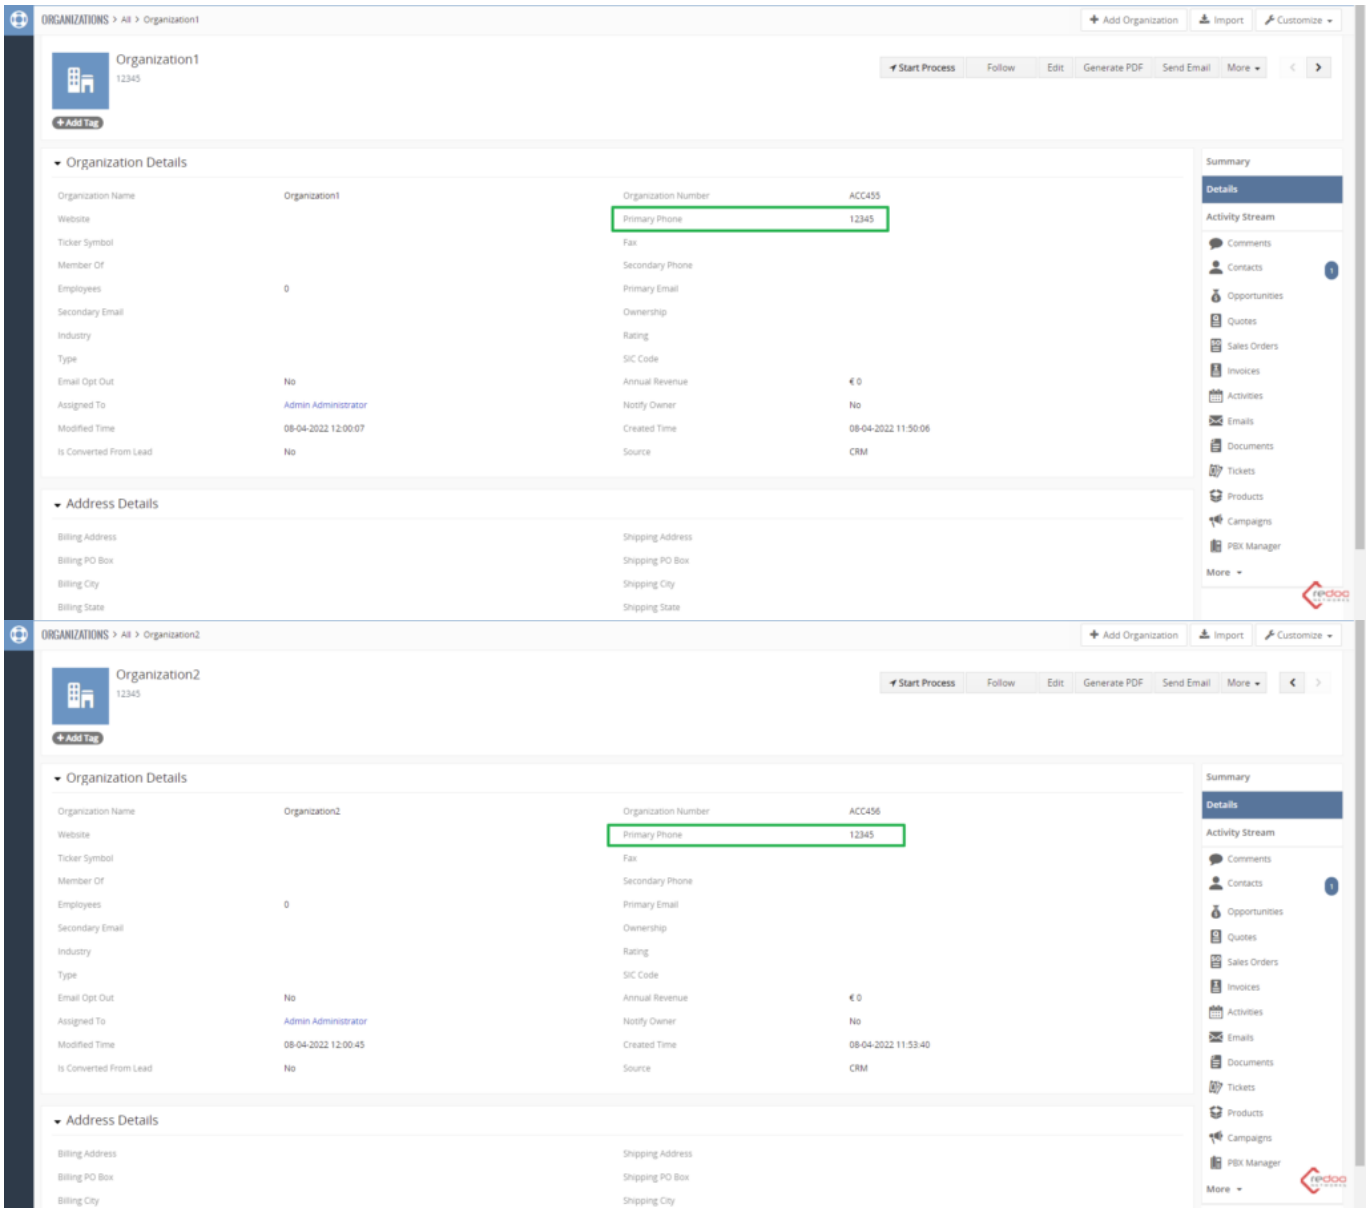

Duplicates Merging

Flexx Suite has a feature to find duplicates of different records

This feature is useful to find the same fields within two or more number of records

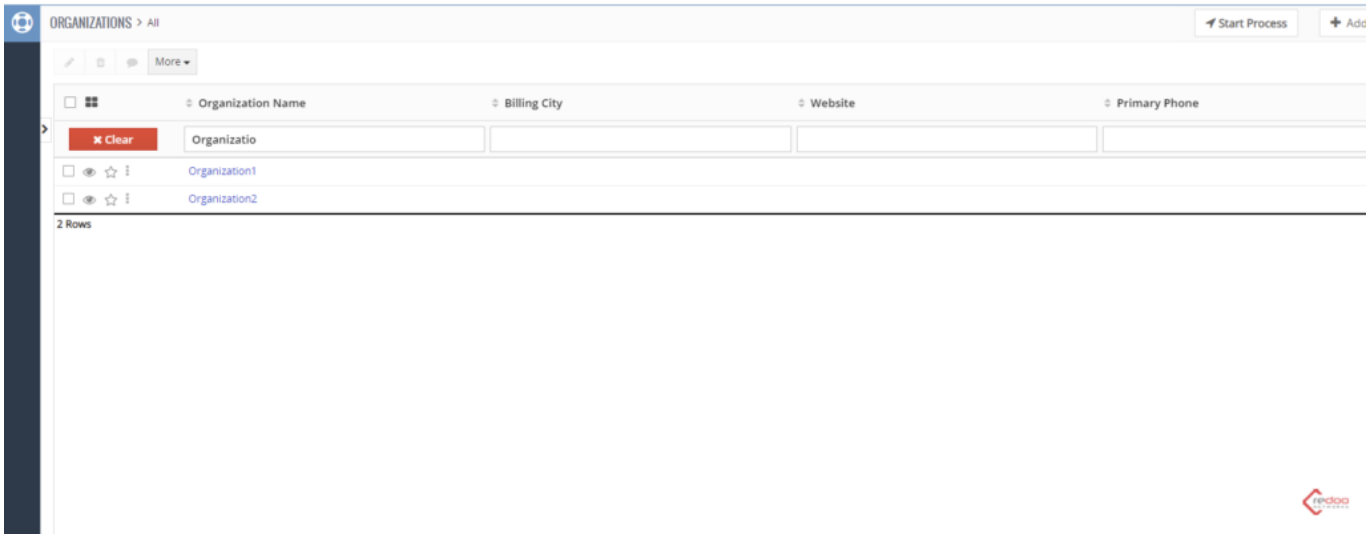

As an example lets look at these two Organization records which have the same Primary Phone number

Copyright © 2026 Redoo Networks GmbH

To find a duplicate firstly you have to select records which you want to compare (in this case Organization1 and Organization2)

 Copyright © 2026 Redoo Networks GmbH

After you selected records you want to compare use “More” button and choose “Find Duplicates” from the list

In the opened up window select fields you would like to compare (you can select one or multiple number of fields)

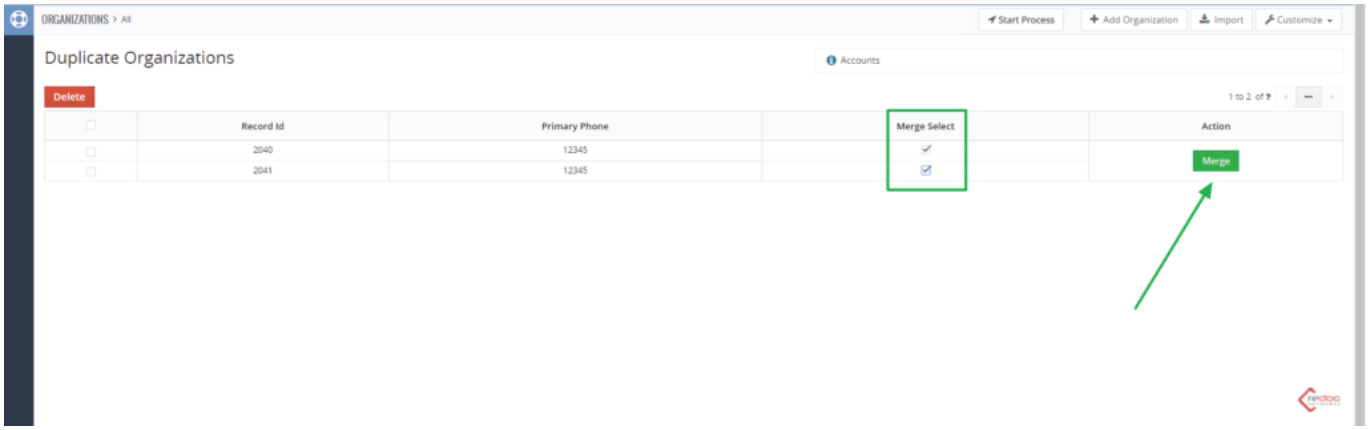

To continue press “Find Duplicates” ones you choose fields to compare

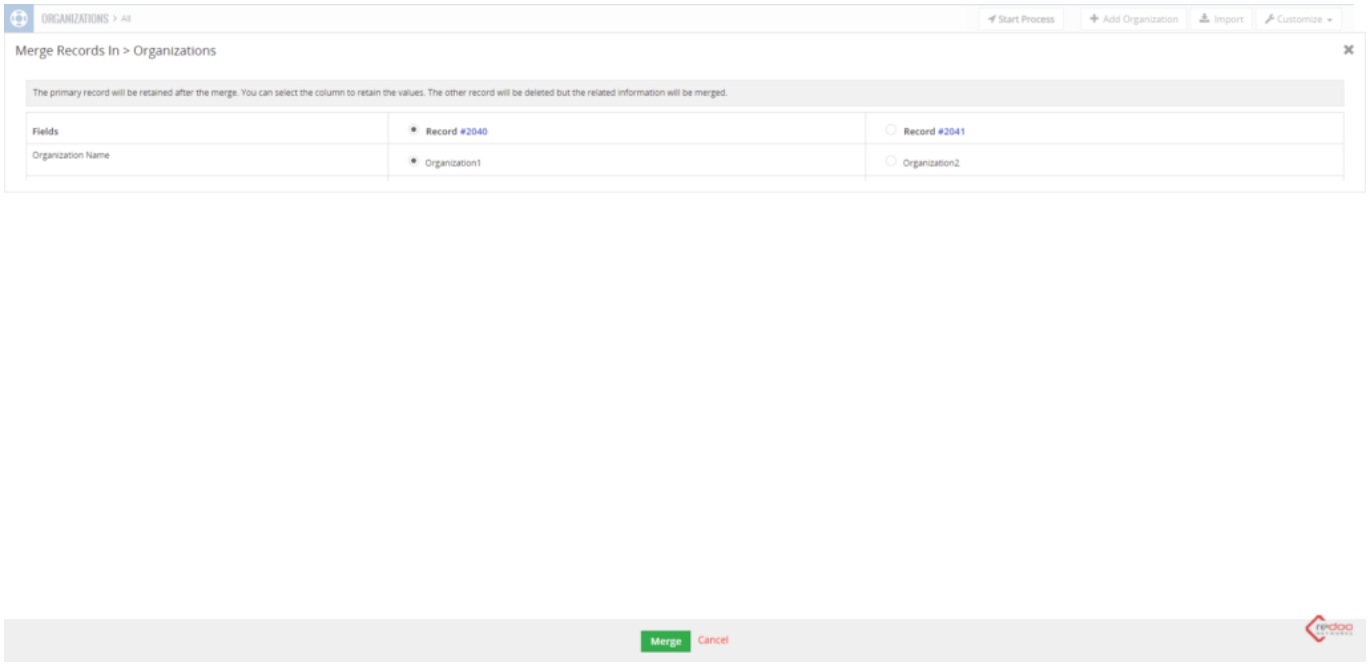

After that you will see a list of all Duplicates within records you chose

 Copyright © 2026 Redoo Networks GmbH

Select which duplicates you would like to merge and press the green “Merge” button on the right

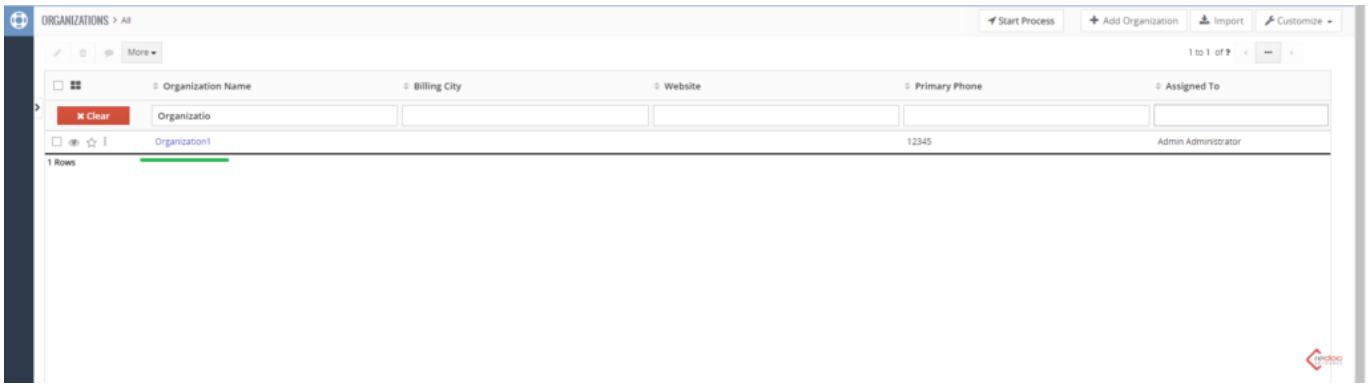

Right after you will be taken to the Merge page when you have to select a record which will inherit all data from the other, from those who have duplicates

After the merge a duplicate will be deleted and the other record will stay, with all information and related records inherited from the duplicate.
