

Workflow Designer

Global Task Options

Copyright © 2022 Redoo Networks GmbH

Starting with Version 600.1601 you could open a “global Task Options” field within every task configuration. Configurations in this block are applied for this single block and will modify the behavior of the blocks.

Here you have a list and description of these configurations, currently available:

Use/Output currencies formated, instead of full precision

This option enable a behavior, similar to the internal workflow.
Every time you use a variable, which contain a currency value, it is formatted by Currency format configuration of current user or the Admin User if executed during a automated cronjob.

The format is applied to **EVERY** currency value within this block and you **CAN NOT** use this variables within formulas in this single block.

If you want to use a currency value inside formulas **AND** formatted, you need to keep this option disabled and use the Helper function **$[currency,$fieldvalue]** to ouput the variable in correct format. This also format the value you set within the parameter, with format of current User.
